

## Postdoc Position in Stem Cell and Cancer

A postdoctoral position in cancer biology and stem cell biology is available in the laboratory of Zhe Li, PhD, Genetics Division, Brigham & Women's Hospital, Harvard Medical School. The research projects will be devoted to the study of ovarian/mammary epithelial stem cells and cellular origins of ovarian/breast cancer in genetically engineered mouse models. The Li Laboratory is broadly interested in elucidating molecular mechanisms of human tumorigenesis using mouse models and cell culture systems. We are particularly interested in developmental oncobiology and stem cell biology. Applicants are expected to have completed their PhD and/or MD degree and be highly motivated for a career in academic biomedical research. Previous experience with ovarian cancer research and laboratory mouse is preferred.

Application and inquiries should be submitted by e-mail to Zhe Li
