

POSTDOCTORAL FELLOWSHIP IN CANCER BIOLOGY

Massachusetts General Hospital Cancer Center and Harvard Medical School, Boston, MA

The Mass General Hospital (MGH) Cancer Center is a world-renowned institution for cancer biology and translational research. MGH is the #1 ranked hospital in the US, the largest teaching hospital for Harvard Medical School, and the largest recipient of NIH Funding of any private hospital in the country.

A postdoctoral position is immediately available to study fundamental mechanisms of breast cancer biology and their application in cancer therapy. Topics of interest include tumor suppressors, tumor metabolism, and tumor genomics relevant to cancer evolution and treatment. Research approaches in the laboratory are uniquely positioned at the interface of biochemistry, cell biology and translational tumor genetic and tissue-based analysis.

The position involves joint academic appointments at MGH and Harvard Medical School, providing a rich intellectual environment within a large and dynamic research community. The candidate must have recently (3 years or less) received a Ph.D. degree in the biological sciences, and be highly motivated and well versed in molecular biology and biochemical techniques. Previous first-author publication in the English-language literature is essential.

Please send CV and cover letter to: p63p73boston@partners.org
