

Post-Doctoral Fellows

NIH and DOD-funded positions are available November 2018 in a newly relocated laboratory of Prof. Seth Corey at the Cleveland Clinic Lerner Research Institute. Our internationally-recognized laboratory is discovering the molecular basis of hematopoiesis and blood disorders.

The post-doctoral scientists will study bone marrow failure and myelodysplastic syndromes by focusing on specific genes, the mechanistic basis of disease, and novel therapeutics. This project involves the use of CRISPR/Cas9 editing, RNA molecular biology, and/or cell biology and biochemistry in zebrafish models and mammalian cells.

The ideal candidates will be in the process of completing her/his graduate degree or have less than 2 years of post-doctoral training. Experience in zebrafish development and advanced microscopy or metabolism is highly desired.

The post-doctoral fellows will benefit from a highly collaborative and productive and resource-rich environment at Cleveland Clinic, #2 hospital in the United States, and the NCI-designated Case Comprehensive Cancer Center. The Cleveland Clinic Lerner Research Institute provides an excellent environment for biomedical science with competitive salary and benefits. Our postdoctoral training program (<http://www.lerner.ccf.org/education/postdoc/>) provides excellent support for career development in biomedical research. Cleveland is a major metropolitan area and home to major sports teams, world-class arts and theatre, and panoramic views along Lake Erie.

Enthusiastic, creative applicants should send by email a CV, skype address, a cover letter describing research experience and interests, and names and addresses of three references to: Seth Corey, MD, Professor of Pediatrics and Molecular Medicine-designate coreylab@mac.com
