

Postdoctoral Research Position in Molecular Biology and Cancer Research

The Georgia Cancer Center at the Augusta University is now seeking to fill one postdoctoral research position in molecular biology and cancer research. The successful candidates will work on federally-funded projects, and study histone modifications and the regulation of the DNA damage response using molecular and genomics approaches, as well as genetically-engineered mouse models (Nat Commun 6: 6752, 2015; J Biol Chem 291: 10847, 2016; Oncogene 37: 18, 2018). The candidate must have strong research experience in molecular biology and/or cancer research, and is competent at molecular biological techniques such as molecular cloning and those used in the study of protein-protein interactions. Experience with protein purification is a plus. For more information on the PI's research, visit

<https://www.augusta.edu/cancer/research/labs/yan/>. Candidates must have a Ph.D. degree in Molecular Biology or related fields, and should be highly motivated, independent, and have demonstrated productivity. Send curriculum vitae, including research experience, a publication list and contact information of three references to: Dr. Chunhong Yan (e-mail: cyan@augusta.edu).

The Georgia Cancer Center is the new brand of the only state-run cancer center in the state of Georgia. The Augusta University is formerly known as Medical College of Georgia (MCG). As the only public medical school in Georgia, MCG provides its staff with superior fringe benefits including retirement and health insurance plans.
